REC_DS using C_Week 2_MCQ_Updated

Attempt : 1
Total Mark : 20
Marks Obtained : 11

Section 1 : MCQ

1. Consider the following function that refers to the head of a Doubly Linked List as the parameter. Assume that a node of a doubly linked list has the previous pointer as prev and the next pointer as next.

Assume that the reference of the head of the following doubly linked list is passed to the below function 1 <--> 2 <--> 3 <--> 4 <--> 5 <-->6. What should be the modified linked list after the function call?

```
Procedure fun(head_ref: Pointer to Pointer of node)
    temp = NULL
    current = *head_ref

    While current is not NULL
        temp = current->prev
        current->prev = current->next
        current->next = temp
```

```
    current = current->prev
End While

    If temp is not NULL
        *head_ref = temp->prev
    End If
End Procedure
```

Answer

Status : Skipped   *Marks : 0/1*

2. What will be the output of the following program?

```c
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
    struct Node* prev;
};

int main() {
    struct Node* head = NULL;
    struct Node* tail = NULL;
    for (int i = 0; i < 5; i++) {
        struct Node* temp = (struct Node*)malloc(sizeof(struct Node));
        temp->data = i + 1;
        temp->prev = tail;
        temp->next = NULL;
        if (tail != NULL) {
            tail->next = temp;
        } else {
            head = temp;
        }
        tail = temp;
    }
    struct Node* current = head;
```

```
    while (current != NULL) {
        printf("%d ", current->data);
        current = current->next;
    }
    return 0;
}
```

Answer

1 2 3 4 5

Status : Correct   *Marks : 1/1*

3.   Consider the provided pseudo code. How can you initialize an empty two-way linked list?

Define Structure Node
    data: Integer
    prev: Pointer to Node
    next: Pointer to Node
End Define

Define Structure TwoWayLinkedList
    head: Pointer to Node
    tail: Pointer to Node
End Define

Answer

Status : Skipped   *Marks : 0/1*

4.   What is a memory-efficient double-linked list?

Answer

Each node has only one pointer to traverse the list back and forth

Status : Wrong   *Marks : 0/1*

5.   Which code snippet correctly deletes a node with a given value from a

doubly linked list?

```
void deleteNode(Node** head_ref, Node* del_node) {
    if (*head_ref == NULL || del_node == NULL) {
        return;
    }
    if (*head_ref == del_node) {
        *head_ref = del_node->next;
    }
    if (del_node->next != NULL) {
        del_node->next->prev = del_node->prev;
    }
    if (del_node->prev != NULL) {
        del_node->prev->next = del_node->next;
    }
    free(del_node);
}
```

Answer

Deletes the node at a given position in a doubly linked list.

Status : Wrong   *Marks : 0/1*

6.   What is the correct way to add a node at the beginning of a doubly
linked list?

Answer

void addFirst(int data){ Node* newNode = new Node(data); head-
>next = newNode; newNode->prev = head; head = newNode;}

Status : Wrong   *Marks : 0/1*

7.   How many pointers does a node in a doubly linked list have?

Answer

2

Status : Correct   *Marks : 1/1*

8. Which of the following is false about a doubly linked list?

Answer

Implementing a doubly linked list is easier than singly linked list

Status : Correct   *Marks : 1/1*

9. What does the following code snippet do?

```
struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
newNode->data = value;
newNode->next = NULL;
newNode->prev = NULL;
```

Answer

Inserts a new node at the beginning of a doubly linked list

Status : Wrong   *Marks : 0/1*

10. What happens if we insert a node at the beginning of a doubly linked list?

Answer

The next pointer of the new node is NULL

Status : Wrong   *Marks : 0/1*

11. What will be the effect of setting the prev pointer of a node to NULL in a doubly linked list?

Answer

The node will become the new head

Status : Correct   *Marks : 1/1*

12. Which pointer helps in traversing a doubly linked list in reverse order?

Answer

prev

Status : Correct   *Marks : 1/1*

13. Where Fwd and Bwd represent forward and backward links to the adjacent elements of the list. Which of the following segments of code deletes the node pointed to by X from the doubly linked list, if it is assumed that X points to neither the first nor the last node of the list?

A doubly linked list is declared as

```
struct Node {
    int Value;
    struct Node *Fwd;
    struct Node *Bwd;
);
```

Answer

Status : Skipped   *Marks : 0/1*

14. What is the main advantage of a two-way linked list over a one-way linked list?

Answer

Two-way linked lists allow for traversal in both directions.

Status : Correct   *Marks : 1/1*

15. How do you delete a node from the middle of a doubly linked list?

Answer

All of the mentioned options

Status : Correct   *Marks : 1/1*

16. What will be the output of the following code?

```c
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
    struct Node* prev;
};

int main() {
    struct Node* head = NULL;
    struct Node* temp = (struct Node*)malloc(sizeof(struct Node));
    temp->data = 2;
    temp->next = NULL;
    temp->prev = NULL;
    head = temp;
    printf("%d\n", head->data);
    free(temp);
    return 0;
}
```

Answer

2

Status : Correct   *Marks : 1/1*

17. Which of the following statements correctly creates a new node for a doubly linked list?

Answer

struct Node newNode = (struct Node*) malloc(sizeof(struct Node));

Status : Wrong   *Marks : 0/1*

18. Which of the following is true about the last node in a doubly linked list?

Answer

Its next pointer is NULL

Status : Correct   *Marks : 1/1*

19.   Which of the following information is stored in a doubly-linked list's nodes?

Answer

All of the mentioned options

Status : Correct   *Marks : 1/1*

20.   How do you reverse a doubly linked list?

Answer

By swapping the next and previous pointers of each node

Status : Correct   *Marks : 1/1*
